

Web Reservation Portal

The Power Of Integration: Delivering Stellar Business Performance

momentohs® Web Reservation Portal is a comprehensive hosted web-booking engine provided to a single or multiple chain of properties for managing reservations over the Internet. FITs, guest, corporate, travel agents and web users can make reservations and monitor reservation status using this portal, which ensures fast, secure and cost-effective online reservations. The embedded features also enable bypassing of GDS and switch fees, thereby increasing revenue. Properties are also empowered to grant portal access to their travel agents and other reservation partners. The web portal is capable of handling multiple properties and is integrated with the momentohs® Central Reservation System and Front Office for seamless networking.

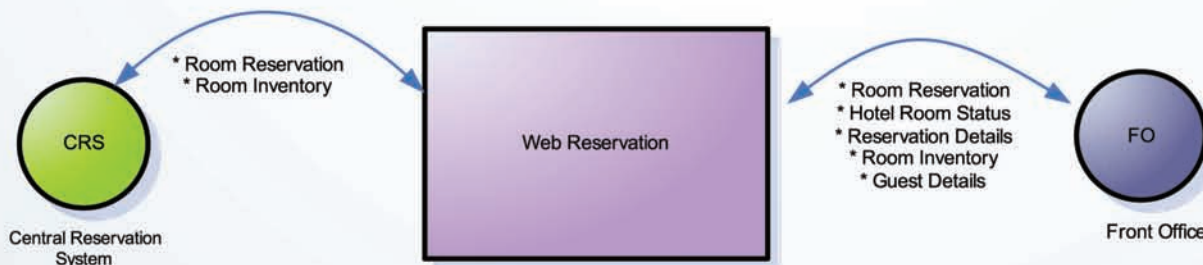

This module also incorporates the hospitality organisation partner offerings, which the guests or travel agents can purchase. This in turn enhances the customer loyalty programmes administered by the property or chain of properties.

- The web portal is capable of handling multiple properties and is integrated with the momentohs® Central Reservation System and Front Office, for seamless networking.

momentohs® Web Reservation module allows dissemination of information that is integrated to the hotel or its website. Its multi-lingual capability further widens global market reach for your business.

Additionally, website designers (either third-party or in-house) can successfully make momentohs® Web Reservation blend with the corporate image of the hotel or hotel chain.
